When you first open Photoshop Elements, you'll see these windows: Image Library This is where you'll see the images on your computer. You can click on images in the image library and apply filters, like black and white or sepia, or add Effects, like rainbow colours. Tools Where you'll find your favorite tools. You can use all of them as a beginner. File This is a new addition for Elements. It has a separate window where you can open image files directly. Help If you are a beginner, this would be the first place to look for help. The first step is to open Photoshop Elements. Open up the images you want to edit or create. Add a Layer You'll notice that there are many different boxes and bags and menus and arrows and everything on your computer. You can click on the plus sign to create a new layer. Click on the white plus symbol and it will turn into a plus symbol. Delete a layer You can delete any of your layers by clicking on the eye symbol or by clicking on the layer and pressing Delete. Duplicate a layer You can duplicate a layer by clicking on the layer, pressing Ctrl+J, and choosing Duplicate Layer. You can then adjust the layer as you like. Merge This allows you to make one layer into a new layer. You can use the merge function to achieve this by pressing Ctrl+E. Rotate You can rotate the layers as much as 90 degrees. Paste You can paste an image, like a Facebook photo, directly onto a layer. How to use the photo-editing tools in Photoshop Elements You use the same tools to edit both the photos you import from a camera and the photos you've saved on your computer. Crop You can crop your photo by clicking on the Crop tool, pressing Ctrl+T, moving the selection tool to the edge of your photo and the center, and then dragging outwards. Adjust Colour If you want to change the colour of the photo, click on the Adjust Colour tool and click on the different colour swatches. Adjust Lighting If you want to change the lighting of the photo, click on the Adjust Lighting tool and move the sliders to 388ed7b0c7

"As I understand, it sounds like simply a way to copy an area of the original image, where the paint is outside the area, and replace it with paint that's inside the area." "Oh, I see. When you do this, the paint is inside the area, so there's no problem. When you do it, just don't paste some paint that's outside the area, and you should be all right."

--TEST-- unlink() on a directory --SKIPF-- --FILE-- --EXPECT-- bool(true) Q: should one learn how to write html code in silverlight 3 or only how to use it? I am starting with silverlight. I have webforms experience. I would like to know how to write html code in Silverlight. A: If you want to create the Silverlight user interface controls, you should use the HTML that's provided by Silverlight. If you need HTML but it doesn't need to be the user interface, then you can use the Silverlight markup extensions.
